

# Hydration tracking in the palm of your hand.

MX3

MX3 Diagnostics has developed a new system that can perform rapid, lab-quality tests using only saliva.

The MX3 Hydration Testing System can measure hydration status in seconds with only a small saliva sample from the tip of the tongue. Designed initially for elite athletes and sports teams, the handheld lab, test strips and intelligent App work together, allowing users the ability to assess and track hydration status quickly, accurately, and easily for the first time ever.

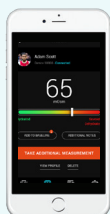

## MX3 Lab

This lightweight, handheld device can go anywhere. Simply insert a test strip into the device for an immediate, lab-quality reading of hydration status. Data automatically pushes to the App.

## Dispenser

Lightweight and portable, the dispenser stores strips and provides a hygienic, hands-free way to load the lab.

## MX3 App

The App is available for a free download on Apple and Android devices. Adding more than 5 user profiles will require a premium purchase.

## Test Strips

These disposable test strips utilize a micro-sample of saliva from the tip of the tongue. Strips are discarded after each use.

## MX3 Pro Dashboard

The comprehensive hydration management portal and App provides hydration tracking over time, with data analytics to help personalize your hydration strategy and improve performance. The customizable user profiles suits the needs of all users including sports organizations coaches, trainers, athletes and individuals.

The MX3 Hydration Testing System contains all the components needed to accurately test and track hydration levels. Each component works together and syncs to the app to capture hydration status in real time.

The MX3 Pro Edition is now available for preorder.  
The kit includes:

Until now, there has been no easy and quick method to measure hydration. MX3 is the only technology in the world that can accurately measure hydration: anytime, anywhere.
